FOR NOTES

A global chemical company approached NotesMove about migrating a large archive of notes from IBM Domino servers.

Our team performed a full evaluation of the client's requirements and built a customized solution for their specific use. In total, 100 client databases residing on IBM Domino servers were identified as candidates for archiving.

The archiving process went smoothly with little downtime for the client and the resulting NotesMove archive flawlessly mimicked the original Notes application layouts when opened in a web browser, **resulting in exceptionally high user acceptance of this archiving solution.**

Client's requirement included:

- Deploy solution on Azure
- Database catalog page for browsing
- Full-text search including attachments
- Support corporate user login (OAUTH)
- Manage access control by database

Currently, about 400 people at the client's organization are using the NotesMove to access legacy Notes data on a daily basis.

Simplify Your Notes Migration.

We offer a cost-effective turnkey solution.

Visit notesmove.com for more information.

"The client's archive consisted of about 120GB worth of data and 1.8 million documents, which were all created without any known issues."
